

Teacher Workshops

The Dynamic Duo: Putting the Punch in Math Instruction

We teach, but are students learning? This workshop takes a fresh look at Mastery Learning and Cooperative Problem Solving, two powerful strategies designed to ensure math success. Mastery learning, a tried-and-true approach, enables all learners to master basic skills before tackling complex math tasks. Cooperative problem-solving provides opportunities to deepen mathematical understanding and make connections to life experiences. In this workshop, participants will actively explore practical, easy-to-use strategies to close achievement gaps and enable ALL students to excel in mathematics.

Innovative Approaches to Literacy Instruction

Kids talk about movies, video games, and music, but do they talk about books? Learn research-based strategies guaranteed to add excitement to your reading program. Find out how to implement a balanced literacy framework of whole group and small group instruction, including literacy stations and independent reading. Supplement your reading program with Literature Circles, a technique that will motivate and challenge your students. This workshop offers many practical strategies for implementing a variety of innovative approaches to reading instruction.
